Abstracts

Cytotherapy is a therapy in which viable cells are injected, grafted or implanted into a patient in order to effectuate a medicinal effect, for example, by transplanting T-cells capable of fighting cancer cells via cell-mediated immunity in the course of immunotherapy, or grafting stem cells to regenerate diseased tissues. The cytotherapy market is driven by the increasing demand for regenerative medicine and cell-based therapies, offering potential treatments for a range of diseases and conditions. Stem cell therapies and other cell-based approaches hold promise for addressing previously untreatable conditions. However, a significant challenge in this market is the need for rigorous clinical trials and regulatory approvals to ensure the safety and efficacy of these therapies.
