Report Overview

Czochralski Wafer, often abbreviated as Cz Wafer, is a type of high-purity single-crystal semiconductor wafer primarily used in the manufacturing of electronic devices such as integrated circuits, solar cells, and light-emitting diodes. The term "Czochralski" refers to the method of crystal growth named after Polish chemist Jan Czochralski, who invented this process in 1918. In the Czochralski process, a single crystal is pulled from a melt of high-purity starting material, such as silicon, through a controlled cooling and pulling mechanism. This method ensures that the resulting wafer has minimal defects and impurities, which is crucial for the performance of electronic devices. Czochralski wafers are characterized by their uniformity, high electrical conductivity, and ability to be sliced into thin, precise layers for further processing in semiconductor fabrication.
