Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Damiana Extract competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of damiana extract was 15,700 tons, with an average price of US\$35.5/kg. Damiana extract is a concentrated liquid or powder derived from the leaves of the *Turnera diffusa* shrub, a plant native to Mexico, Central, and South America. Traditionally used as an aphrodisiac and to support sexual health, it is now also used for its potential effects on mood, stress, and weight. The upstream of damiana extract mainly includes plant raw material growers, plant extraction solvent suppliers, and quality testing institutions. Representative companies include Xi'an SR Bio, Nexira, Martin Bauer, Indena, and Naturalin. Downstream customers are concentrated in health supplement brands, herbal medicine manufacturers, and functional beverage companies, including GNC, Now Foods, Nature's Way, Red Bull's formulation suppliers, and domestic companies like By-Health. These companies use damiana extract in compound formulations to relieve stress, improve sleep, enhance sexual health, and improve mental concentration, meeting the demand of young consumers for herbal functional products. Industry trends are characterized by standardization of active ingredients and diversification of formulations. Mainstream companies are developing high-ratio extraction products (10:1 and 20:1) and standardized flavonoid content to improve the stability and functionality of final formulations. Traceable raw materials, solvent-free technology, and green extraction processes are becoming the focus of competition. Driving factors include the global upgrading of health supplement consumption, the rapid growth of the emotional health market, the resurgence of herbal medicine, and the rapid expansion of functional beverages. The main obstacles stem from unstable plant raw material supply, restrictions on sexual health plant ingredients

imposed by regulations in different countries, a lack of large-scale clinical data on active ingredients, and the industry's significant susceptibility to seasonal and geographical factors. The annual production capacity of damiana extract production lines is approximately 80 to 150 tons, with a gross profit margin of approximately 20% to 30%. High-purity or standardized extracts can achieve gross profit margins of 35% to 45%.

The global Damiana Extract market size was estimated at USD 559.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
