Report Overview

Dandelion rubber tires are an innovative and sustainable alternative to traditional rubber tires, derived from the latex of dandelion roots (particularly the Russian dandelion, *Taraxacum kok-saghyz*). Unlike conventional tires, which rely on natural rubber harvested from rubber trees (*Hevea brasiliensis*), dandelion rubber offers a more environmentally friendly solution by reducing deforestation, lowering transportation emissions (since dandelions can be cultivated in temperate climates closer to manufacturing hubs), and requiring less land and water. The rubber extracted from dandelions has shown comparable elasticity, durability, and performance characteristics to traditional rubber, making it a viable option for tire production. Additionally, dandelion rubber tires align with the growing demand for bio-based and circular economy solutions in the automotive industry, appealing to eco-conscious consumers and companies aiming to meet sustainability goals. However, challenges such as scalability, cost competitiveness, and optimizing extraction processes remain key hurdles in widespread adoption. The market for dandelion rubber tires is still in its early stages but holds significant potential as research advances and automotive manufacturers seek greener alternatives.
