## Abstracts

The demand for data center construction in China is growing rapidly. The data center itself is a high energy consumption industry. 46% of data center energy consumption comes from IT equipment systems, including server equipment, storage equipment, and network communication equipment, 31% comes from air conditioning systems, 8% comes from UPS power supply and distribution systems, and 4% belongs to auxiliary lighting systems. It can be seen that in addition to the energy consumption of main equipment, most of the energy consumption of data centers comes from the air conditioning and refrigeration system. Therefore, the key to reducing PUE and operating costs is to reduce cooling power consumption. Driven by the drive to reduce costs, data center cooling technology has emerged with the development of the data center and cloud computing industries.

The global Data Center Prefabricated Cooling Station market size was estimated at USD 16400.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 10.70% during the forecast period.
