## Abstracts

Data enrichment tool is a software or platform that enhances the value of raw data by integrating multi-source data, supplementing missing information or improving data quality. Its core goal is to transform "thin" basic data into more complete and more analytically valuable information to support more accurate decisions, deeper insights or more efficient business processes. Using AI and machine learning algorithms, data enrichment tools can analyze and understand data more intelligently, automatically identify patterns, associations, and anomalies in data, and achieve more accurate data cleaning, classification, and labeling. For example, sentiment analysis of text data can be automatically performed through deep learning models to add sentiment tags to customer feedback data. As the business demand for real-time decision-making increases, data enrichment tools will have stronger real-time data processing capabilities and be able to perform enrichment operations at the moment the data is generated. For example, in financial transaction scenarios, transaction data is enriched in real time to detect fraud immediately. Integration with technologies such as the Internet of Things and blockchain will continue to deepen. IoT devices generate a large amount of data, which data enrichment tools can process and supplement to enhance the value of data; blockchain technology can ensure the security and immutability of data, providing reliable underlying support for the data enrichment process. The demand for data enrichment tools in industries such as e-commerce, healthcare, financial services, and marketing continues to increase. In e-commerce, it is used to optimize customer portraits and achieve precision marketing; in the field of healthcare, it can improve patient data and assist in medical decision-making and research. With the development of emerging technologies and industries, such as autonomous driving, virtual reality, and smart cities, data enrichment tools will play an important role in these fields, processing and enriching complex sensor data, user behavior data, etc.

The global Data Enrichment Tool market size was estimated at USD 763.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
