Abstracts

Data fabric software is a unified data platform that enables organizations to integrate their data and data management processes. Adopting a data fabric allows for the creation of complete views of their data, helping power existing processes and applications and enabling the rapid development of new use cases. A data fabric is not just a single solution but an entire data ecosystem that connects disparate data sources and infrastructure types across locations (on-premises, in the cloud, or hybrid environments), enabling analysis without onerous data integration requirements. The software offers benefits such as the ability to explore and extract value from any form of data regardless of location by connecting stores of structured and unstructured data. It provides centralized access via a single, unified view of an organization's data that inherits access and governance restrictions. Some of the future market trends of data fabric software are: Increased use of cloud-based and software-as-a-service (SaaS) delivery models to provide greater accessibility, scalability, flexibility, and cost-effectiveness of data fabric software. Increased adoption of model-based data fabric (MBDF) to support data integration, data quality, data governance, data security, data access, and data analytics using formalized modeling techniques and tools. Increased integration of artificial intelligence (AI) and machine learning (ML) capabilities to enhance the automation, optimization, intelligence, and learning of data fabric software. Increased demand for data fabric software for emerging domains such as Internet of Things (IoT), smart cities, autonomous vehicles, digital twins, and Industry 4.0. Increased collaboration and interoperability among different data fabric software tools and platforms to enable seamless data exchange and workflow management across the data life cycle.

The global Data Fabric Software market size was estimated at USD 4862.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20%

during the forecast period.
