## Abstracts

Dataset building services refer to services provided by professional organizations or platforms that offer high-quality, structured, and usable datasets for applications in artificial intelligence, machine learning, computer vision, and natural language processing through processes such as data collection, cleaning, annotation, enhancement, and quality control. This service covers the entire process from raw data acquisition to standardized data output, including various data types such as images, videos, text, audio, and sensor data, to meet the needs of algorithm training, model optimization, and intelligent system development. The downstream clients of dataset building services mainly include artificial intelligence R&D companies, internet companies, developers of autonomous and intelligent driving systems, medical imaging AI, fintech companies, and research institutions. These clients require high-quality labeled and customized datasets to train models, optimize algorithms, and verify system performance. Downstream services typically have high gross margins: standardized data labeling services have a gross margin of approximately 53%. With the widespread application of artificial intelligence and machine learning technologies, dataset construction services have become a key factor in promoting the development of these technologies. High-quality datasets are the basis for training accurate models, and building and labeling these datasets requires not only professional skills, but also powerful computing resources and efficient management tools. By outsourcing dataset construction services, companies can focus on their core business while ensuring the accuracy and diversity of the data. However, with the increasing attention paid to data privacy and security issues, it has also become crucial to choose the right service model (such as cloud or on-premises deployment) and ensure data compliance.

The global Dataset Building Service market size was estimated at USD 813.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 20.10%

during the forecast period.
