Abstracts

Decorative Chrome Plating, often referred to simply as chrome, is a technique of electroplating a thin layer of chromium onto a metal substrate. The automotive industry has been a significant consumer of decorative chrome plating. Chrome-plated components, such as grilles, bumpers, and trim, are used to enhance the aesthetics of vehicles. The market trend in the automotive sector is influenced by factors like changing consumer preferences, electric vehicles, and regulations regarding chrome usage. The chrome plating industry has faced increasing regulatory scrutiny due to environmental concerns related to hexavalent chromium, a toxic byproduct of traditional chrome plating processes. This has led to the development and adoption of alternative plating methods and the use of trivalent chromium, which is less environmentally harmful.

The global Decorative Chrome Plating market size was estimated at USD 5324.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
