Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Deep Sea Logger competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A deep-sea logger is a high-precision data acquisition device designed specifically for extreme deep-sea environments, widely used in marine scientific research, environmental monitoring, and seabed resource exploration. It can operate stably for extended periods under high pressure, low temperature, and strong corrosion conditions, exhibiting excellent sealing and durability. This device typically supports operating depths exceeding 6000 meters, with adjustable data acquisition frequencies (1Hz to 10Hz), built-in storage capacities ranging from 8GB to 128GB, and battery life of 30 to 180 days, making it suitable for long-term unattended deep-sea observation missions. The product has an average price of approximately US\$700 per unit, with total global sales of approximately 1.25 million units. The gross profit margin averages between 40% and 60%. A deep-sea logger is a device specifically designed for underwater data recording and monitoring. It is designed to withstand the harsh conditions of the deep-sea environment and can be used in various applications such as oceanography, marine biology, and offshore oil and gas exploration. The upstream supply chain for deep-sea loggers includes the production of electronic components, sensors, and other materials used in the manufacture of the equipment. The downstream supply chain includes end-users of the equipment, such as research institutions, oil and gas companies, and government agencies. In terms of global market share distribution, North America and Europe are the largest markets for deep-sea loggers due to the large number of research institutions and offshore oil and gas exploration activities in these regions. The Asia-Pacific region is also a growth market for this product due to increasing investment in oceanographic research and offshore

projects in the region.

The global Deep Sea Logger market size was estimated at USD 875.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.00% during the forecast period.
