Abstracts

A Deep Transcranial Magnetic Stimulator (dTMS) is a non-invasive medical device that uses electromagnetic fields to stimulate deeper regions of the brain. It is an advanced form of Transcranial Magnetic Stimulation (TMS) designed to treat neurological and psychiatric conditions such as major depressive disorder (MDD), obsessive-compulsive disorder (OCD), and chronic pain. By delivering magnetic pulses through specialized H-coils, dTMS can reach deeper and broader brain areas than traditional TMS, improving treatment efficacy. This technology is gaining popularity as an alternative for patients who do not respond to conventional therapies.

Market Driver: The increasing prevalence of neurological and psychiatric disorders, such as major depressive disorder (MDD), obsessive-compulsive disorder (OCD), and chronic pain, is a key driver for the deep transcranial magnetic stimulator (dTMS) market. As traditional treatments like medication and psychotherapy prove ineffective for many patients, dTMS offers a promising non-invasive alternative. Additionally, advancements in TMS technology, including personalized stimulation protocols and AI-assisted treatment planning, are improving efficacy and expanding its adoption. Growing government support and regulatory approvals for dTMS devices in regions like the U.S. and Europe further boost market growth, making the therapy more accessible.

Market Challenge: Despite its advantages, the dTMS market faces challenges related to high costs and limited reimbursement policies. The initial investment for dTMS devices is significant, making it difficult for smaller clinics and healthcare facilities to adopt the technology. Additionally, insurance coverage for dTMS treatments remains inconsistent across different countries, limiting patient access. Another challenge is the need for specialized training for healthcare providers, as proper administration of dTMS requires skilled professionals. Furthermore, skepticism about its long-term effectiveness and competition from alternative neuromodulation therapies, such as electroconvulsive therapy (ECT) and vagus nerve stimulation (VNS), present additional hurdles to market

expansion.

The global Deep Transcranial Magnetic Stimulator market size was estimated at USD 156.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.60% during the forecast period.
