Abstracts

Defocus lenses are divided into defocus soft lenses and defocus frame lenses. The principle of the defocus lens is to correct the hyperopic defocus around the retina through a special optical design, so that the peripheral image is also focused on the retina or in front, and the increase in the degree of myopia is controlled. Myopia prevention and control products are developing rapidly, and the market space for defocus lenses is sufficient. After the epidemic, teenagers take online classes at home, use electronic products for a longer period of time, and reduce outdoor activities. The demand for myopia prevention and control products has grown rapidly. Among them, out-of-focus frame lenses can be sold in optical shops because of the low threshold for fitting them; the price is much lower than that of orthokeratology lenses, which is cost-effective and fully fills the gap in the market; it has a wide range of applications, is comfortable and safe to wear, and is easily popular among teenagers and parents. Accepted, the penetration rate is expected to increase rapidly.

The global Defocus Lenses market size was estimated at USD 1733.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
