Abstracts

Dehydroepiandrosterone (DHEA), also known as androstenolone, is an endogenous steroid hormone precursor. It is one of the most abundant circulating steroids in humans. DHEA is produced in the adrenal glands, the gonads, and the brain. It functions as a metabolic intermediate in the biosynthesis of the androgen and estrogen sex steroids both in the gonads and in various other tissues. However, DHEA also has a variety of potential biological effects in its own right, binding to an array of nuclear and cell surface receptors, and acting as a neurosteroid and modulator of neurotrophic factor receptors. Research institutions and pharmaceutical companies are exploring prasterone's potential beyond its current uses, including neuroprotection and metabolic modulation, potentially broadening its market scope. In developed regions like the U.S. and Europe, prasterone is increasingly seen as part of the growing hormone replacement therapy market, driven by an aging population seeking to address not only physical but also sexual and cognitive health declines. As DHEA levels naturally decrease after age 30—particularly rapidly in women—the need for hormonal balance interventions has grown, making prasterone-based therapies more appealing. Additionally, a broader wellness trend focusing on holistic health and quality of life improvements has positioned prasterone as a non-traditional yet scientifically backed option. Significant investments in research by both academia and industry have accelerated the understanding of prasterone's multifaceted benefits, supporting its development as a safer alternative for hormone replacement. Simultaneously, the facial mask market is expanding due to increased skincare awareness among younger generations and the influence of strong skincare cultures in South Korea, Japan, and China. The rise of online sales channels, live streaming, and influencer marketing has amplified brand reach, especially among younger, trend-driven consumers. Men are increasingly embracing skincare, expanding the consumer base, particularly in China. Brands are developing masks tailored to specific skin concerns, incorporating

ingredients like sodium hyaluronate and collagen, while also exploring sustainable, eco-friendly materials. Multifunctional masks that combine benefits like anti-aging, hydration, and brightening are becoming popular among busy consumers seeking effective, convenient solutions.

The global Dehydroepiandrosterone (DHEA) market size was estimated at USD 49.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
