Abstracts

Demulsification water purifying agent is composed of non-ionic polyether. The product has multiple branch chains, excellent bridging flocculation ability, and can quickly connect oil droplets dispersed in water, and assemble and float, so that oil and water can be quickly separated. The product is widely used in the pretreatment process of oilfield produced liquid separator. It can act on two phases of oil and water, that is, it has two phase demulsification ability. The agent contains active components that can act on two kinds of emulsions: oil-in-water and oil-in-water, which can separate oil from water by reducing the tension of oil-water interfacial membrane, and can make oil droplets in sewage collect and float up by bridging and coalescence.

The global Demulsification Water Purifying Agent market size was estimated at USD 325.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.25% during the forecast period.
