Abstracts

Denitrification deep bed filter equipment is a kind of water treatment equipment that can use denitrification bacteria to convert nitrate in the water into nitrogen gas, and can also filter out suspended solids and organic matter in the water. Denitrification deep bed filter equipment mainly consists of the following parts: Filter material layer: Generally, quartz sand, ceramsite, volcanic stone and other fixed media with a large specific surface area are used as a film carrier for denitrification bacteria and also serve as a filter effect. Supporting layer: Generally, gravel, filter plates, filter heads and other structures are used to support the filter material layer and also provide water and gas distribution functions. Backwashing system: Generally, a combination of gas and water backwashing is used to flush the filter material layer regularly to remove trapped pollutants and aged biofilms, and restore the filtration and denitrification capabilities of the filter material layer. Carbon source dosing system: Generally, methanol, acetic acid, ethanol and other organic substances are used as carbon sources. Through the dosing pump and control valve, an appropriate amount of carbon source is added to the filter material layer according to the nitrate concentration in the water to provide denitrifying bacteria. electron donor. Automatic control system: Generally, a PLC programmable controller is used to realize automatic control and monitoring of denitrification deep bed filter equipment through flow meters, nitrate online analyzers, liquid level switches and other instruments. The advantages of denitrification deep bed filter equipment are simple structure, small footprint, low operating cost, good treatment effect, stable effluent quality, and can reach Class A or above standards. Denitrification deep bed filter equipment is mainly used in industrial wastewater treatment, municipal sewage treatment, river management and other fields. It is a new type of water treatment equipment with broad application prospects.
