Abstracts

Cone Beam Computed Tomography (CBCT) is an advanced imaging technology critical in modern diagnostics. Unlike traditional X-ray machines that produce two-dimensional images, CBCT creates detailed 3D images of the skeletal, dental, and soft tissue structures. It's named for the cone-shaped X-ray beam it uses, which rotates around the patient, capturing multiple images from different angles. These images are then reconstructed into a three-dimensional representation by sophisticated computer algorithms. This technology provides a comprehensive view of the patient's anatomy, offering invaluable insights for accurate diagnosis and treatment planning. Its precision and efficiency make it especially useful in specialized fields like dentistry, orthopedics, and radiology. CBCT's role is to elevate patient care standards, providing practitioners with a tool that is both innovative and reliable for a wide range of clinical applications.

The global Dental Cone Beam Computed Tomography Cbct market size was estimated at USD 649.8 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.15% during the forecast period.
