Report Overview

Dental Dry Milling Machine (Dental Dry Milling Machine) is a kind of equipment used to produce dental restorations. Through CAD/CAM technology, the digitalized dental restoration design data is transferred to the processing milling machine, and then the ceramic block material is milled to make dental restorations. body. Compared with traditional hand-made methods, dental dry machining milling machine can realize high-precision, high-efficiency, high-repeatability manufacturing process, which greatly improves the quality and precision of dental restorations. The dental dry machining milling machine uses dry machining technology, that is, it does not need to use water for cooling during the machining process, but collects the cutting dust generated by the built-in dust collection system to keep the working environment clean. Therefore, the use of dental dry machining milling machines does not need to be equipped with water and drainage systems. Dental dry machining milling machine can make a variety of dental restorations, including full crowns, partial crowns, veneers, bridges, implant abutments, orthodontic appliances, etc., suitable for various porcelain materials, such as zirconia, cobalt chromium alloy, Porcelain etc. Dental dry machining milling machines are also used in some special cases, such as in some places where there is no water source or when it is necessary to prevent moisture from affecting the properties of the restoration material. Dental dry machining milling machine has become one of the main tools in the manufacture of modern dental restorations and is widely used in the field of oral restoration.
