Report Overview

A deoxidizer for food is a specialized chemical compound or additive used in the food processing and preservation industry to remove or neutralize oxygen in food products. The primary purpose of using a deoxidizer is to prevent oxidation, which can lead to spoilage, rancidity, and loss of nutritional value in food items. Deoxidizers work by reacting with oxygen molecules, thereby reducing their concentration and slowing down the oxidation process. These compounds are often used in packaged foods, such as meat, fish, and dairy products, to extend their shelf life and maintain their quality.
