### Report Overview

Deoxycholic Acid is a naturally occurring bile acid that plays a crucial role in the digestion and absorption of dietary fats in the human body. It is one of the primary components of bile, which is produced by the liver and stored in the gallbladder. Deoxycholic Acid aids in the emulsification of fats, making them more accessible to digestive enzymes, and facilitates their absorption in the small intestine. In addition to its physiological function, Deoxycholic Acid has been utilized in medical applications, such as in the treatment of certain liver diseases and as an ingredient in injectable aesthetic treatments to reduce the appearance of submental fat, commonly known as a double chin. The compound is characterized by its molecular structure, which lacks an oxygen atom at the 7th carbon position, distinguishing it from other bile acids like cholic acid and chenodeoxycholic acid.

This report provides a deep insight into the global Deoxycholic Acid market covering all its essential aspects.
