## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Deproteinized Whey competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Deproteinized Whey (also called dairy product solids, whey permeate or modified whey) is a coproduct of the production of whey protein concentrate and whey protein isolate. Good solubility and a pleasant dairy flavor make whey permeate formulator-friendly. In 2024, global production of deproteinized whey reached 995.2 k tons, with an average selling price of US\$526 per ton. Typical single-line production capacity is approximately 50,000-100,000 tons, and the industry's gross profit margin is approximately 10%-20%. Cost structure: direct materials account for approximately 35%, manufacturing costs account for approximately 40%, and labor costs account for approximately 8%. Industry chain: upstream consists of milk source supply and primary processing, while downstream industries include food and beverage, animal feed, etc.

The global Deproteinized Whey market size was estimated at USD 524.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
