Report Overview

A Desktop 3D Scanner is a compact, high-resolution scanning device designed to capture three-dimensional data of objects and surfaces. It is typically used for applications such as reverse engineering, quality control, and 3D modeling. The scanner works by emitting a light source, such as a laser or structured light, which is projected onto the object. The reflected light is then captured by a camera or sensor, and the data is processed to create a detailed 3D digital model. This model can be further manipulated, analyzed, or used for 3D printing.
