Abstracts

Device storage (also known as "Self storage" and "self-service storage") is an industry in which storage space (such as rooms, lockers, containers, and/or outdoor space), also known as "storage units" is rented to tenants, usually on a short-term basis (often month-to-month). Device storage tenants include businesses and individuals. The device storage market has experienced significant growth and change in recent years. Some of the current trends in the device storage market include:

- Increased demand for higher-capacity storage:** As mobile devices become more powerful and capable of recording and storing higher-quality photos and videos, users are demanding larger storage capacities. This has led to increased demand for devices with storage capacities of 128GB or higher.
- Transition to solid-state storage:** Solid-state storage, which uses flash memory instead of spinning disks, is becoming increasingly popular in mobile devices due to its durability, speed, and power efficiency. As a result, there is a trend toward increasing use of solid-state storage in smartphones, tablets, and laptops.
- Growing demand for cloud storage:** With the rise of cloud computing, more users are storing their data in the cloud instead of on their devices. This is driving demand for device storage that can seamlessly integrate with cloud storage services.
- Expansion of storage options:** In addition to increased capacity, device storage options are expanding to include new formats such as removable microSD cards and external hard drives that can be connected to mobile devices. This gives users greater flexibility and control over their storage needs.

The global Device Storage market size was estimated at USD 324.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
