Report Overview

Diabetes, also known as diabetes mellitus, is a metabolic disease resulting in high blood sugar. The hormone known as insulin is responsible for the movement of sugar from the blood into the cells, which is stored and used for providing energy to the body. In case of diabetes, the body is either unable to produce enough insulin or cannot effectively utilize the insulin produced. Two main types of diabetes are type 1 diabetes and type 2 diabetes. In case of type 1 diabetes, the immune system attacks and destroys insulin-producing cells in the pancreas, while in type 2 diabetes, the body becomes resistant to insulin. Dietary supplements are ingredients intended to enhance the diet of a person and contain vitamins, minerals, herbs, amino acids, metabolites, and other substances. These supplements are used for lowering blood glucose, improving cholesterol, lowering blood pressure, neuropathy, insulin resistance, and other complications in diabetic patients.
