## Abstracts

Diamond polycrystalline processing machine is a mechanical equipment specially used for processing diamond polycrystalline materials. Diamond polycrystalline materials, due to their extremely high hardness, wear resistance, thermal stability and chemical stability, are widely used in many industrial fields, such as cutting tools, abrasives, heat sink materials, semiconductor substrates, etc. Diamond polycrystalline processing machines integrate advanced processing technologies and techniques, including but not limited to precision mechanical cutting, grinding, polishing, laser processing, ultrasonic processing, etc., to meet the high-precision processing requirements for different shapes, sizes and surface qualities of diamond polycrystalline materials. These processing technologies usually need to be carried out under strictly controlled environmental conditions to ensure the stability of the processing process and the consistency of the processing results. The design of the equipment fully considers the characteristics of diamond polycrystalline materials, such as high hardness and brittleness, to ensure that both efficient cutting can be achieved during the processing process and material damage and cracks can be avoided.

The global Diamond Polycrystalline Processing Machine market size was estimated at USD 3644.98 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 2.80% during the forecast period.
