Abstracts

Diamond single crystal processing machines refer to mechanical equipment that can perform processing procedures such as cutting, grinding, and polishing of diamond single crystals. These equipment usually have the characteristics of high precision, high stability, and high reliability to meet the strict requirements of diamond single crystal processing quality in the fields of semiconductors, optics, and superhard materials. Diamond single crystal processing machines use advanced laser cutting technology or mechanical cutting technology to achieve precise cutting of diamond single crystals. Laser cutting technology uses a high-power density laser beam to irradiate the surface of diamond, causing it to undergo rapid oxidation-reduction or graphitization reactions, thereby achieving effective cutting. Mechanical cutting relies on hard tools such as diamond grinding wheels for grinding. After processing, there may be polycrystalline and graphite phase problems caused by thermal effects on the surface of diamond single crystals. At this time, the diamond single crystal processing machine can process the surface into a high-quality, non-destructive surface at the nanoscale through processes such as mechanical grinding and fine polishing. These processes can remove surface convexities, improve surface roughness, and enhance the overall performance of diamond single crystals. Diamond single crystal processing machines focus on the control of precision and stability during design and manufacturing. By adopting advanced servo motors, precision guide rails, high-rigidity mechanical structures and other components, high precision and high stability are ensured during the processing. At the same time, the equipment is also equipped with advanced electronic control systems and detection devices to achieve real-time monitoring and adjustment of processing parameters.

The global Diamond Single Crystal Processing Machine market size was estimated at USD 119.74 million in 2024 and is projected to grow at a compound annual growth rate

(CAGR) of 3.00% during the forecast period.
