Report Overview

Diaphragm Globe Valves are a type of quarter-turn valve that are widely used in various industries for controlling the flow of fluids. These valves are characterized by their unique design, which incorporates a flexible diaphragm that separates the valve body from the fluid being controlled. This design feature allows for excellent sealing capabilities, making them suitable for handling aggressive, corrosive, or abrasive fluids. Diaphragm Globe Valves are typically composed of a body, bonnet, stem, and diaphragm, with the diaphragm being the key component that ensures a tight seal. They are known for their durability, low maintenance requirements, and ability to handle a wide range of flow rates and pressures. These valves are often preferred in applications where a high level of control over the flow is needed, such as in chemical processing, water treatment, and food and beverage industries.
