Abstracts

Dicyclopentadiene phenol epoxy resin, also known as DCPD phenol epoxy resin, is produced by reacting dicyclopentadiene with phenol to form DCPD-phenol resin, which is further reacted with epichlorohydrin to obtain DCPD-phenol epoxy resin. The synthesis process of this resin involves polymerizing dicyclopentadiene under high temperature and high pressure conditions, and then adding rigid structures such as benzene rings and alicyclic rings to the molecular structure to improve the material's heat resistance and reduce water absorption. This structural adjustment allows the resin to exhibit good heat resistance and chemical stability after curing.

The global Dicyclopentadiene Phenol Epoxy Resin market size was estimated at USD 320.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
