### Report Overview

Didecyldimethylammonium Bromide (DDMAB) is a quaternary ammonium compound widely used as a cationic surfactant and biocide. It is a colorless to pale yellow liquid with the chemical formula  $C_{20}H_{42}BrN$ . DDMAB is characterized by its two long-chain alkyl groups (decyl) attached to a central nitrogen atom, which is also bonded to two methyl groups and a bromide ion. This structure endows it with amphiphilic properties, meaning it has both hydrophilic (water-attracting) and hydrophobic (water-repelling) characteristics. In various applications, DDMAB serves as an effective antimicrobial agent, fabric softener, and corrosion inhibitor. It is commonly utilized in industrial settings, such as in water treatment, paper manufacturing, and the textile industry, to control microbial growth and improve product quality. Due to its cationic nature, DDMAB can interact with anionic substances, making it a versatile component in formulations where such interactions are desired.
