Report Overview

The Differential Pressure Type Air Tightness Leak Detector is a specialized device designed to measure the air tightness of various enclosures, such as buildings, containers, or industrial equipment. This product operates by creating a differential pressure between the inside and outside of the tested object, typically by introducing a controlled flow of air. The detector then measures the pressure difference, which is indicative of the presence and size of leaks. It is commonly used in applications where maintaining a sealed environment is critical, such as in HVAC systems, cleanrooms, or pressure vessels. The device provides a quantitative assessment of air tightness, enabling users to identify and address leaks, thereby improving energy efficiency, safety, and performance. It is an essential tool for quality control, maintenance, and compliance with industry standards in various sectors, including construction, manufacturing, and research.
