Report Overview

Difluorochloromethane (R22) is a hydrochlorofluorocarbon (HCFC) refrigerant commonly used in air conditioning, refrigeration, and heat pump systems. As a transitional substance between ozone-depleting chlorofluorocarbons (CFCs) and more environmentally friendly hydrofluorocarbons (HFCs), R22 has been phased out in many regions under the Montreal Protocol due to its ozone-depleting potential (ODP) and high global warming potential (GWP). Despite regulatory restrictions, R22 remains in use in older systems, particularly in developing countries where phase-out schedules are extended. The market is driven by demand from maintenance and servicing of existing equipment, though supply constraints and rising costs have emerged due to production bans in key regions. Alternatives like R410A and R32 are gaining traction, but the legacy dependence on R22 ensures continued, albeit declining, demand in specific applications.

This report provides a deep insight into the global Difluorochloromethane (R22) market covering all its essential aspects.
