Abstracts

Digital asset creation and trading platforms are online platforms based on blockchain technology that allow users to create, buy, sell, and trade various forms of digital assets, such as NFTs (non-fungible tokens), digital artwork, music, videos, and virtual real estate. These platforms provide creators with tools to mint and showcase their digital works, while offering buyers and collectors a secure, transparent, and decentralized marketplace for purchasing and exchanging digital assets. These platforms play a crucial role in the digital economy, fostering the rise of creator economies and digital ownership. The downstream users of digital asset creation and trading platforms (such as NFT platforms and digital collectible markets) are primarily content creators (artists, IP holders), brands, game/virtual asset publishers, and collectors and investors who use the platforms to issue and trade digital assets, achieving monetization and asset circulation. Platforms profit through transaction fees, minting fees, secondary market commissions, and value-added services (such as marketing, authentication, and copyright management). Due to the high barriers to entry they provide, such as digital infrastructure, smart contracts, and user authentication technologies, their gross profit margins are typically high, around 63%. Digital asset creation and trading platforms are driving a new era of digital economy. With the support of blockchain technology, creators can directly transform their works into digital assets, bypass traditional intermediaries, and obtain more economic returns. These platforms not only give digital art, music and virtual items real ownership and scarcity, but also create unprecedented opportunities for collectors and investors. However, with the rapid growth of the market, the challenges faced by the platform are also increasing, such as high transaction fees, environmental impact and copyright protection. These issues require the industry to work together to solve them in order to ensure the sustainable development of the digital asset market.

The global Digital Asset Creation and Trading Platform market size was estimated at USD 2633.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.40% during the forecast period.
