Abstracts

Digital Controlled Potentiometers (DCPs) are electronic components that are used to adjust and set electrical resistance in a circuit. They are also known as digital potentiometers or digital variable resistors. DCPs operate digitally, using a control signal to change the resistance value, instead of using a mechanical rotation like a traditional potentiometer. They are often used in electronic circuits for precision control of things like volume, brightness, and tone in audio and video equipment, as well as in motor control and power management applications.

The global Digital Controlled Potentiometers Dcps market size was estimated at USD 320.45 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
