Abstracts

3D printing is a method of creating a physical object from a three-dimensional digital model by depositing several thin layers of material. It converts a digital object (its CAD representation) into a physical object by layering materials on top of each other. To cure the resin, digital light processing (DLP) printers use a form of a digital projector as the light source. This is accomplished by flashing each layer's image throughout the entire segment.

The global Digital Light Processing Dlp Printer market size was estimated at USD 118.75 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.25% during the forecast period.
