Report Overview

A Digital Subtraction Angiography (DSA) X-ray machine is a sophisticated medical imaging device utilized in interventional radiology and vascular surgery. This advanced technology employs a process of digital image subtraction to visualize the vasculature or blood vessels, by capturing images before and after the injection of a contrast medium. The system then digitally subtracts the pre-injection image from the post-injection image, effectively eliminating the background and highlighting the blood vessels. This allows for a clear, detailed view of the vascular system, which is crucial for diagnosing and treating various vascular diseases, such as aneurysms, stenoses, and vascular malformations. The DSA X-ray machine is equipped with high-resolution detectors and advanced software algorithms that enable real-time imaging and precise guidance during minimally invasive procedures, thereby reducing the need for more invasive surgical interventions.
