Report Overview

Diluted Type Epoxy Resins are a category of epoxy resins that have been specifically formulated to have a lower viscosity, making them more fluid and easier to handle. These resins are derived from the reaction of epoxy compounds with reactive diluents, which reduce the molecular weight and increase the distance between polymer chains, resulting in a more diluted product. Diluted epoxy resins offer improved flow characteristics, which facilitate application and penetration into substrates, and are commonly used in various industrial applications such as coatings, adhesives, and composite materials. They are known for their excellent adhesion, chemical resistance, and mechanical strength, which are enhanced by the dilution process, allowing for a more uniform distribution of the resin in the final product.
