Report Overview

Dimethicone PEG-8 Meadowfoamate is a synthetic compound commonly used in the cosmetic and personal care industry. It is a derivative of dimethicone, a type of silicone that provides skin conditioning and emollient properties. The "PEG-8" refers to the polyethylene glycol (PEG) chain length, which is used to modify the dimethicone's properties, enhancing its solubility and compatibility with other ingredients.

"Meadowfoamate" indicates that the compound has been further modified with meadowfoam, a plant-derived fatty acid, to improve its emulsifying and stabilizing capabilities. This ingredient is often employed in skincare and hair care products for its ability to provide a smooth, non-greasy feel and to help form stable emulsions. It is known for its skin-softening effects and is generally considered safe for use in cosmetics.
