Report Overview

The Diode Pump Solid State Module, often abbreviated as DPSS, is a type of laser module that combines the efficiency of diode lasers with the frequency-doubling capabilities of solid-state laser materials. This technology utilizes a high-power diode laser to pump a solid-state gain medium, such as Nd:YVO4 or Nd:YAG, which then emits a laser beam at a specific wavelength. The emitted beam is then passed through a nonlinear crystal, where the frequency is doubled, resulting in a higher frequency output beam. DPSS modules are known for their compact size, high efficiency, and ability to produce high-quality laser beams with good beam quality and stability. They are widely used in various applications, including material processing, medical treatments, scientific research, and military applications, due to their reliability and performance advantages over traditional laser sources.

In 2024, the global Diode Pump Solid State Module market is projected to reach approximately USD xx Million, with expectations to grow at a compound annual growth rate (CAGR) of around xx between 2024 and 2033.
