Report Overview

A Direct Gas-fired Make-up Air Unit is a type of HVAC equipment designed to provide fresh, conditioned air to a building or space, particularly when there is a need to replace exhausted or stale air. This unit operates by directly burning natural gas or propane to generate heat, which is then used to warm the incoming outside air. The heated air is then distributed throughout the building to maintain a comfortable and healthy indoor environment. The unit is equipped with a heat exchanger that transfers the heat from the combustion process to the incoming air, ensuring energy efficiency. It is commonly used in commercial and industrial settings where there is a high demand for fresh air, such as in restaurants, factories, or any space with high exhaust requirements. The unit's primary function is to maintain proper air quality and temperature balance within the building, contributing to the overall comfort and well-being of occupants.
