Abstracts

Direct metal laser sintering is an additive manufacturing technique that uses a laser as the power source to sinter powdered material, aiming the laser automatically at points in space defined by a 3D model, binding the material together to create a solid structure. It is similar to selective laser sintering; the two are instantiations of the same concept but differ in technical details. Selective laser melting uses a comparable concept, but in SLM the material is fully melted rather than sintered, allowing different properties.

The global Direct Metal Laser Sintering Machine market size was estimated at USD 225.45 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
