## Abstracts

Direct screwing into plastic refers to the process of fastening components by driving a screw directly into a plastic material without the need for a pre-tapped metal insert or nut. This technique is commonly used in the assembly of plastic housings and parts in industries such as automotive, electronics, and consumer goods. Specialized screws, often called thread-forming or thread-cutting screws, are designed with geometries that allow them to displace or cut the plastic material to form secure threads during installation. The choice of screw type, plastic material, and pilot hole size is critical to ensure strong thread engagement, minimize stress or cracking, and maintain long-term joint integrity. Direct screwing offers advantages such as cost efficiency, simplified assembly, and reduced component count, but it also requires careful design to accommodate creep resistance, thermal expansion, and repeated tightening or loosening cycles in the plastic substrate. Direct Screwing into Plastic has a wide range of downstream applications, including household appliances, automobile industry, aerospace manufacturing, construction industry, electronics industry, machinery and equipment manufacturing, and manufacturing aftermarket industries. In recent years, with the steady growth of the global economy and the strong demand in the consumer market, the steady development of downstream industries has become the main driving force for market development. Raw material price fluctuations, environmental protection policies tend to be stricter, and the risk of fluctuations in macroeconomic conditions and market conditions are the main factors hindering market development. In terms of regions, developed countries such as Europe, America, and Japan are the main source areas for high-quality products because they started early in the development of manufacturing countries, have perfect industry standards, and have technological advantages. In the future, with the accumulation of industrial technology and continuous investment in equipment, developing countries will become regions with faster market development. In terms of competition, there are many manufacturers of Direct Screwing

into Plastic, the scale of enterprises and the quality of products are uneven, and the competition in the industry is relatively fierce. The global key companies of Direct Screwing into Plastic include SFS Group, EJOT, Stanley, Aoyama Seisakusho, Bulten AB, etc. Global top five players had a share approximately 28% in terms of revenue. In terms of future development trends, the Direct Screwing into Plastic market is in a period of industrial transformation. With the technological progress and industrial upgrading of the main downstream industries, the performance and quality requirements of Direct Screwing into Plastic will be further improved, which will promote the technical level of the Direct Screwing into Plastic market and promote the improvement of product quality.

The global Direct Screwing into Plastic market size was estimated at USD 830.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
