### Report Overview

Direct vented goggles are a type of personal protective equipment designed to shield the eyes from hazards such as debris, dust, chemicals, and other airborne particles while allowing airflow through strategically placed vents to prevent fogging. These goggles are widely used in industries like construction, manufacturing, laboratories, and healthcare, where eye protection is critical but prolonged wear can lead to lens fogging due to temperature and humidity changes. The vents often feature a baffle or mesh design to block larger particles while maintaining ventilation. Unlike sealed or indirect vented goggles, which offer higher protection against liquid splashes, direct vented goggles prioritize comfort and visibility, making them suitable for environments where fogging poses a greater risk than liquid exposure. Their design balances protection and usability, catering to workers who require clear vision and extended wear without compromising safety.
