Report Overview

Directional drilling service, also known as directional boring or horizontal directional drilling (HDD), refers to a technique used in the field of drilling and excavation to create boreholes with a predetermined direction and pathway. Unlike traditional vertical drilling, directional drilling allows for the installation of underground infrastructures, such as pipelines or utilities, in a controlled and precise manner. This technique involves the use of specialized drilling equipment that can steer the drill bit underground, following a desired path while maintaining accurate measurements and angles. Directional drilling is commonly employed in various industries, including oil and gas exploration, utility installations, telecommunications, and environmental remediation.
