### Report Overview

Disodium Nucleotide (I+G), a flavor enhancer composed of disodium inosinate (IMP) and disodium guanylate (GMP), is widely used in the food industry to amplify umami taste, particularly in processed foods, snacks, sauces, and instant noodles. Its synergistic effect with monosodium glutamate (MSG) allows for lower sodium content while maintaining robust flavor profiles, aligning with growing consumer demand for healthier, reduced-sodium products. The market is driven by expanding processed food consumption, especially in Asia-Pacific regions where convenience foods dominate, as well as by innovations in clean-label and natural alternatives. However, regulatory scrutiny over synthetic additives and competition from plant-based enhancers like yeast extracts present challenges. Key players focus on production efficiency and sustainable sourcing to meet both industrial demand and evolving food safety standards. Growth is further supported by the rising popularity of ready-to-eat meals and the foodservice sector's demand for cost-effective flavor solutions.
