Abstracts

Disposable balloon inflation devices are medical tools designed for inflating and deflating balloons used in various medical procedures, such as angioplasty or stent placement. These single-use devices ensure precise control over the inflation pressure of the balloon, which is critical for widening narrowed blood vessels or expanding stents in the cardiovascular system. Typically, they consist of a pressure gauge, a syringe or pump, and a release valve, allowing healthcare providers to carefully monitor and adjust the balloon's expansion. Because they are disposable, these devices help maintain sterility and reduce the risk of cross-contamination between patients.

The global Disposable Balloon Inflation Devices market size was estimated at USD 115.4 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
