### Report Overview

The disposable choledochoscope is a single-use, flexible endoscopic device designed for visualizing and diagnosing biliary tract conditions, such as stones, strictures, or tumors, during minimally invasive procedures like cholangioscopy. Unlike reusable scopes, it eliminates the risk of cross-contamination and infection while reducing the need for costly reprocessing. Its adoption is driven by increasing demand for infection control in healthcare, advancements in disposable medical technology, and regulatory pressures to minimize hospital-acquired infections. The market is expanding due to rising biliary diseases, growing preference for minimally invasive surgeries, and cost-effectiveness in avoiding sterilization logistics. However, challenges include concerns over environmental waste and higher per-procedure costs compared to reusable alternatives.
