Abstracts

Disposable environmentally friendly straws refer to completely degradable straws, such as biodegradable plastic straws, paper straws, straw straws, starch straws, etc. Growing demand for eco-friendly products is a key factor driving the growth of the market. The government has taken various initiatives to reduce the use of plastic and has enacted strict laws to limit the use of traditional plastic materials in the production of appliances. In general, paper materials are adaptable, versatile, lightweight, strong and recyclable. They can be made in various colors, shapes and sizes to suit customers' needs. Rapidly growing global food and beverage industry is another growth inducer. PLA (polylactic acid) is another name for biodegradable plastic straws, made from plant starches and oils (most commonly corn). Most of these straws are organically degradable in commercial composting facilities because they are formed by plants. The eco-friendly straws market is expected to witness rapid growth over the forecast period owing to rising consumer awareness. Due to changes and advancements in government legislation, the capabilities of manufacturers and consumers are constantly evolving. Plastic straws are being phased out and replaced with biodegradable straws such as bamboo straws, biodegradable straws, metal straws and glass straws as the latter generate a lot of waste. The global biodegradable straws market is expected to grow over the forecast period owing to the increasing stringent regulations on plastic usage.

The global Disposable Environmental Protection Straw market size was estimated at USD 6066.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 20.50% during the forecast period.
