### Report Overview

A Disposable Peripheral Capillary Oxygen Saturation (SpO<sub>2</sub>) Sensor is a single-use, non-invasive medical device designed to measure the oxygen saturation level in a patient's blood. This device typically consists of a small, flexible sensor that is attached to the patient's fingertip, earlobe, or another extremity with a thin, adhesive strip. The sensor emits light at two different wavelengths, which is absorbed by the blood in the capillaries and then detected by a photodetector. The difference in absorption between the two wavelengths allows the device to calculate the percentage of oxygenated hemoglobin in the blood, providing a real-time, continuous measurement of SpO<sub>2</sub> levels. This information is crucial for monitoring patients with respiratory issues, during surgery, or in critical care settings, as it helps healthcare professionals assess the effectiveness of oxygen therapy and adjust treatments accordingly to maintain adequate oxygenation.

In 2024, the global Disposable Peripheral Capillary Oxygen Saturation (SpO<sub>2</sub>) Sensor market is projected to reach approximately USD xx Million, with expectations to grow at a compound annual growth rate (CAGR) of around xx between 2024 and 2033.
