Report Overview

Disposable smart diapers are an advanced iteration of traditional diapers, incorporating embedded sensors and IoT technology to monitor key health metrics such as moisture levels, temperature, and even early signs of urinary tract infections (UTIs) or dehydration. These diapers connect to mobile apps via Bluetooth or Wi-Fi, providing real-time alerts to caregivers, enabling timely changes and proactive health management. Designed primarily for infants, elderly individuals, and patients with limited mobility, smart diapers aim to enhance hygiene, convenience, and health monitoring while reducing the risk of rashes or infections. The integration of biodegradable materials and sustainable manufacturing processes is also becoming a key focus, addressing environmental concerns associated with conventional disposable diapers. This innovation bridges the gap between personal care and digital health, positioning itself at the intersection of wearable technology and hygiene products.
