Report Overview

A Dissolved Oxygen (DO) Pen is a compact, handheld device designed to measure the concentration of dissolved oxygen in water. It is an essential tool for monitoring and maintaining the health of aquatic ecosystems, particularly in applications such as aquariums, ponds, and water treatment facilities. The DO Pen typically features a probe that is immersed in the water, which then measures the oxygen levels using an electrochemical sensor. This sensor converts the oxygen concentration into an electrical signal, which is then displayed on the pen's digital screen in parts per million (ppm) or milligrams per liter (mg/L). The device is user-friendly, offering a quick and accurate way to assess the oxygen levels in water, which is crucial for the survival and well-being of aquatic organisms.
