Report Overview

Distareth-100 IPDI is a specialized polyurethane-based polymer additive derived from isophorone diisocyanate (IPDI) and distearyl alcohol, primarily used as a rheology modifier, thickener, and stabilizer in high-performance coatings, adhesives, and personal care formulations. This compound enhances viscosity control, improves film formation, and provides thermal stability, making it valuable in industries requiring durable, flexible, and high-gloss finishes, such as automotive paints, industrial coatings, and premium cosmetics. Its hydrophobic nature and resistance to hydrolysis make it particularly suitable for water-resistant applications, while its compatibility with various resins and pigments allows for versatile formulation adjustments. Market demand is driven by the growing need for advanced performance materials in sectors like automotive refinishing, construction, and personal care, where durability and aesthetic qualities are critical. Regulatory trends favoring low-VOC and sustainable additives further influence its adoption, though cost sensitivity and competition from alternative rheology modifiers pose challenges. The market is characterized by innovation in eco-friendly variants and expanding applications in emerging economies with robust industrial and cosmetic sectors.
